

Department of Information & Communication Technology

Follow the steps for the below errors.

1. **Switch off the kit** first and then change the USB port -> Look for the port number in device manager -> change the COM port in flash magic.
2. Go to “Options” -> Advanced Options -> Mark “High Speed Communications” and change the Baud rate to **115200 (Preferrable)** -> Click **OK**
3. **SWITCH ON THE KIT AND CLICK “Start”**
4. For the above errors you can also try switching off the kit and changing the baud rate to 7200 and then switching ON the kit.
  - Sometimes it works on 7200 & 9600 for both erasing and downloading
  - If you change settings in advanced options, then it'll affect “erasing and downloading”

---

If the above steps don't work, troubleshoot it by following the below steps.

1. Changing the **USB** cable
2. Changing the **RS232** cable
3. Change the **Power supply**.

If none of the above works, **only then change the KIT.**
